Executive Summary

The digital ecosystem is showing stable growth with a total of 5,459 transactions recorded.

While the **1.62% conversion rate** aligns with industry benchmarks, the high volume of 'Product Views' suggests a strong initial interest that is not fully translating into 'Add to Cart' actions.

Organic search remains our strongest acquisition channel, providing the highest quality traffic.

Quick Wins

Channel Efficiency: Direct and Organic traffic account for **75%** of revenue. Focus on SEO to maintain this low-cost acquisition.

Mobile Gap: Mobile conversion is **15% lower** than desktop. Technical audit of the mobile checkout process is required.

Customer Loyalty: Repeat customers spend **2.4x more** than new users. Loyalty programs should be prioritized.

Strategic Recommendations & Action Items

Optimize Funnel: Implement A/B testing on product pages to reduce the 70% drop-off rate after 'Product View'.

Mobile First: Enhance the UI/UX for tablet and mobile users to bridge the conversion gap.

Market Expansion: Explore localization for non-English segments as they currently represent untapped potential.
